PROFESSIONAL SUMMARY

Technical professional with 5+ years spanning security operations, network administration, systems troubleshooting, and hands-on hardware and industrial equipment work. Experience diagnosing complex problems, identifying solutions, and managing implementation across client environments and cross-functional teams. CCNA-certified and NSA CAE-CD validated, with hands-on experience across SIEM, vulnerability management, network fundamentals (TCP/IP, VLANs, subnetting), Linux and Windows Server administration, and industrial control equipment. Currently completing a Bachelor of Applied Technology in Cybersecurity at Collin College (expected December 2026).

CORE COMPETENCIES

Security Operations: Threat hunting, indicators of compromise (IOC) investigation, incident response, alarm/event monitoring, root-cause analysis, security reporting and documentation

Access Control & Systems Administration: Active Directory administration, IAM/MFA enforcement, credentialing and access provisioning, Windows Server, Linux command-line administration

Networking: TCP/IP, VLANs, subnetting, switch configuration and troubleshooting (CCNA-trained), network cabling, connectivity troubleshooting

Risk & Compliance: Vulnerability assessment, CVSS-scored risk reporting, CIS benchmark validation, policy and procedure adherence

Hardware & Industrial Equipment: Physical server assembly, firmware updates, hand and power tool proficiency, PLC- and HMI-controlled equipment operation and maintenance

Data Analysis & Tools: Wazuh, Splunk, Security Onion, Snort, Wireshark, Nessus, OpenVAS, Python, Bash/Shell, Windows Server, Active Directory

Communication & Training: Cross-functional coordination with internal teams and external clients, mentoring and training 50+ personnel on security and safety best practices

WORK EXPERIENCE

Incident Response Specialist

2024 – Present

Technauf Cloud and Managed IT Service · Part Time

- Diagnosed and resolved complex security issues for small and mid-size business clients across multiple locations, measured by incidents contained before escalation, by conducting root-cause analysis, threat hunting, and coordinating remediation with client stakeholders.
- Maintained compliant access and connectivity across client environments, measured by zero unauthorized access incidents during engagements, by administering Active Directory, MFA, and IAM policies, and applying CCNA-trained TCP/IP, VLAN, and subnetting principles.
- Reduced mean incident response time 40%, measured by triage-to-resolution logs, by designing and deploying custom Python/Bash automation scripts for monitoring, alerting, and case documentation.
- Improved real-time threat detection for 5 client organizations by implementing and administering SIEM monitoring (Wazuh + Splunk).
- Delivered clear, actionable findings to technical and non-technical stakeholders by conducting vulnerability assessments and penetration tests and translating risk data into stakeholder-ready reports.

Production Lead / Machine Specialist

Jul 2020 – Present

Shutterfly INC · Plano, TX

- Sustained safe, consistent throughput across all shifts, measured by quality and accuracy targets, by overseeing daily operations of PLC- and HMI-controlled production equipment using hand and power tools.
- Strengthened safety and operational compliance by training and mentoring 50+ employees on equipment safety procedures and operational best practices.
- Reduced equipment downtime 30% on PLC/HMI-controlled industrial control systems by applying root-cause analysis and implementing proactive maintenance protocols.
- Maintained accurate compliance records by administering shift reporting, incident logging, and cross-team coordination.

KEY PROJECTS

Home Lab Server Build & Infrastructure — Assembled and deployed 3+ physical servers, performing hardware assembly, network cabling, firmware updates, and Windows Server/Active Directory installation.

Network IDS / SIEM Lab — Built a full network monitoring environment (Security Onion, Snort, Wazuh, Splunk) including switch and VLAN configuration for real-time event correlation.

Cloud Security Hardening — Secured AWS/Azure workloads via IAM/access-control policies, MFA enforcement, and CIS benchmark validation.

Digital Forensics Investigation — Reconstructed a full incident timeline and identified IOCs via disk imaging (FTK Imager), artifact analysis (Autopsy), and metadata extraction (ExifTool).

Penetration Testing Lab — Delivered stakeholder-ready, CVSS-scored findings by running full-scope security assessments (Nmap, Hydra, Burp Suite, Metasploit).

Automation & Scripting — Python/Bash pipelines in a Linux environment for log analysis, system health checks, and scheduled reporting.

EDUCATION

Bachelor of Applied Technology — Cybersecurity — Collin College, Frisco TX — NSA CAE-CD *Expected Dec 2026*
Validated Program

Associate of Applied Science — Cybersecurity — Collin College *2024*

Associate of Applied Science — General Studies — Collin College *2024*

CERTIFICATIONS

- **CCNA** — Cisco Certified Network Associate — Collin College, Dec 2024 (Routing & switching, VLANs, IP services, network security, automation)
- **NSA Center of Academic Excellence — Cyber Defense (CAE-CD)** — Collin College, Dec 2024 (Incident response, risk management, digital forensics, cloud security)
- **Information Systems Cybersecurity Certificate** — Collin College, Dec 2024
- **Cybersecurity Infrastructure Technician Certificate** — Collin College, Dec 2024
- **CompTIA Security+** — Expected October 2026
- **GIAC Global Industrial Cyber Security Professional (GICSP)** — Pursuing
